

INSTALLATION, OPERATION & MAINTENANCE MANUAL

Four Post Surface Mounted Lift

Model 4P14EFX and 4P14XFX

Closed Front
(14,000 lb. Capacity)

2311 South Park Rd Louisville, Kentucky 40219
Email: Challengerlifts@soe.freshdesk.com Phone: 800-648-5438

IMPORTANT: READ THIS MANUAL COMPLETELY BEFORE
INSTALLING or OPERATING LIFT

Model 4P14 Flat Deck, Closed Front
Installation, Operation and Maintenance

GENERAL SPECIFICATIONS

MODEL: 4P14 [E OR X] FX

[LENGTH]

SPECIFICATIONS	4P14EFX	4P14XFX
A Length Overall	20' 5 3/4"	22' 9 1/4"
B Width Overall	10' 10 3/4"	
C Inside Columns	116"	
D Between Columns	16' 4"	18' 7 1/2"
E Height of Columns	90 1/2"	
F Height of Runways	7 1/4"	
G Width of Runways	20"	
H Width Between Runways	40" or 43"	
I Max/Min Wheelbase *	182 1/2" / 89-3/4"	210" / 103-3/8"
J Rise Height	78"	
Lifting Capacity (Hyd. Pressure @ Cap.)	14,000 lbs. (2800 psi)	
Air Supply Required	90-120 psi Clean Dry	
Motor	2 HP	
Voltage (Single Phase Std.) **	208-230 Volt	
Speed of Rise	75 Seconds (approximate)	
Min. Recommended Bay Size	12' x 24'	12' x 26'

* Wheelbase is based on a tire diameter of 30"

** Optional 3 phase, 50/60Hz, 208, 230 or 460V available.

Fig 1 – General Specifications and Service Bay Layout

VERTICAL CLEARANCE

Check the height of the area where the lift is to be installed. Clearance should be calculated based on the full raised height of the lift.

WARNING Failure by purchaser to provide adequate clearance could result in unsatisfactory lift performance, property damage, or personal injury.

FLOORING

Be certain you have the proper concrete floor to properly handle the loaded lift. Floor should be in generally good condition with no large cracks, spalling or deterioration.

Minimum requirements for concrete are 4 inches minimum depth, with steel reinforcement, 3500 psi, cured for 28 days per local commercial practice. This lift is designed to accommodate a 3 inch total variation in elevation at the base of the four posts. Floor should be level within 1/2 inch from side-to-side and 2 1/2 front-to-rear to avoid special shimming. No anchors should be installed within 8 inches of any crack, edge, or expansion joint. If these conditions cannot be met, a pad may be poured to accommodate the lift.

Check with local building inspectors and/or permits office for any special instructions or approvals required for your installation.

A qualified person should be consulted to address seismic loads and other local or state requirements.

WARNING Failure by purchaser to provide the recommended mounting surface could result in unsatisfactory lift performance, property damage, or personal injury.

LOCATION

This lift has been evaluated for indoor use only with an operating ambient temp. range of 5 – 40°C (41-104°F). Outdoor Installation is Prohibited.

ELECTRICAL REQUIREMENTS

For lift installation and operation, it is necessary to have a dedicated circuit with circuit breaker or time delay fuse. Refer to wiring diagram for circuit sizing.

AIR REQUIREMENTS

This lift is equipped with an air operated lock release system. **The air supplied to the lift must be clean, dry, lubricated, and regulated to 90-120 psi, FRL (Filter/Regulator/Lubricator).** The FRL must be within 30 feet of lift. **Failure to provide clean, dry, lubricated, and pressure regulated air will void warranty on pneumatic components.**

SAFETY NOTICES AND DECALS

For your safety, and the safety of others, read and understand all of the safety notices and decals included here.

READ ENTIRE MANUAL BEFORE ASSEMBLING, INSTALLING, OPERATING, OR SERVICING THIS EQUIPMENT.

PROPER MAINTENANCE AND INSPECTION IS NECESSARY FOR SAFE OPERATION.

DO NOT OPERATE A DAMAGED LIFT.

Safety decals similar to those shown here are found on a properly installed lift. Ensure that all safety decals have been correctly installed per the **SAFETY DECAL PLACEMENT** instructions. Verify that all authorized operators know the location of these decals and fully understand their meaning. Replace worn, faded, or damaged decals promptly.

WARNING Do not attempt to raise a vehicle on the lift until the lift has been correctly installed and adjusted as described in this manual.

NOTICE

If attachments, accessories, or configuration modifying components used on this lift are located in the load path and affect operation of the lift, affect the lift electrical listing, or affect intended vehicle accommodation; and if they are not certified for use on this lift, then the certification of this lift shall become null and void. Contact the participant for information pertaining to certified attachments, accessories, or configuration modifying components.

Receiving

The shipment should be thoroughly inspected as soon as it is received. The signed bill of lading is acknowledgement by the carrier of receipt in good condition of shipment covered by our invoice.

If any of the goods called for on this bill of lading are shorted or damaged, do not accept them until the carrier makes a notation on the freight bill of the shorted or damaged goods. Do this for your own protection.

NOTIFY **Challenger Lifts** AT ONCE if any hidden loss or damage is discovered after receipt.

IT IS DIFFICULT TO COLLECT FOR LOSS OR DAMAGE AFTER YOU HAVE GIVEN THE CARRIER A CLEAR RECEIPT.

File your claim with **Challenger Lifts** promptly. Support your claim with copies of the bill of lading, freight bill, and photographs, if available.

Fig 2 – Package Components

Edition of Standards Referenced

Where any ANSI standard or ALI materials are referenced within this manual, the most recent edition shall apply.

Component Packing List

ITEM #	QTY/ LIFT	DESCRIPTION
1	1	IDLER RUNWAY ASS'Y.
2	1	POWER RUNWAY ASS'Y
3	1	POWER COLUMN ASS'Y
4	3	IDLER COLUMN ASS'Y
5	2	ENTRANCE RAMP WELD
6	2	CROSS BEAM ASS'Y
7	1	POWER UNIT
8	1	HARDWARE BOX
9	2	MOVABLE WHEEL CHOCK
10	2	FRONT WHEEL STOP
11	2	SHIPPING BRACKET WELD
12	8	1/2" SHIPPING HARDWARE

INSTALLATION

SAFETY REQUIREMENTS FOR INSTALLATION AND SERVICE

Refer to ANSI/ALI ALIS (current edition)

IMPORTANT: Always wear safety glasses while installing lift.

TOOLS (MINIMUM REQUIRED)

- a. Tape measure, 25ft
- b. Chalk line
- c. 4ft level
- d. 10" & 12" adjustable wrench
- e. Standard open end wrenches 3/8", 7/16", 1/2", 9/16", 5/8", (2) 11/16", 3/4", 15/16", 17mm
- f. 6mm allen wrench
- g. Box knife
- h. Thread locking compound
- i. Thread tape sealant (for air line)
- j. Needle nose pliers
- k. Hammer drill with 3/4" diameter carbide tipped bits
- l. 2lb hammer
- m. Torque wrench: 150 foot pounds minimum with 1 1/8" socket
- n. 8 ft. Step ladder
- o. Blocking – (4) 4x4x30", (4) 1x4x12"
- p. Transit for leveling alignment lift

LAYOUT

- 1) Lay out the service bay according to the architect's plans or owners instructions, **Fig 1**. Be certain that the proper conditions exist, see page 3.
- 2) Unpack lift. Remove all packaging from Power Runway (power runway has four cable sheaves at rear end) and pull threaded cable ends out. Make sure the cables are in the proper sheaves at the 4-stack, **Fig 3**.

Model 4P14 Flat Deck, Closed Front
Installation, Operation and Maintenance

Fig 3 – Power Runway 4-Stack (rear view)

- 3) Position runways on blocking (see Fig 4) per layout lines established in step 1. Use four 30" long 4x4's spanning the width of the runway and

four 12" long 1x4's to shim up the jack-rail side of the runway. Cable #1, #3, & #4 should be extending out from the rear of the power runway and cable #2 from the front of the power runway, Fig 4.

- 4) Position the front and rear cross beams, Fig 4. (Both cross beams are identical.)
- 5) Reach in through either of the access holes in the cross beam tube and pull out the roll of 4mm dia. plastic air line connected to the air cylinder at the end of the cross beam. Repeat for opposite access hole and position the cross beam near the end of the runways as in Fig 4.

Fig 4 – Runway Layout

- 6) Remove the four (4) cross beam sheaves (one sheave from each end) and the two idler runway sheaves (also one sheave from each end). The runway sheave pins do not need to be removed, just lowered enough to remove the sheaves.
- 7) Starting from the bottom of the sheave stack, route cable #4 through the access hole and up out the left end of the rear beam. Repeat for cable #3 out the right end of the rear beam. Route cable #1 through the access hole, and back out the idler side access hole. **Look through the idler end of the cross beam and ensure that cable #1 and #3 have not crossed.**
- 8) Route cable #1 through the idler runway, into the front cross beam access hole, and out the right end of the front beam. (Don't forget to route it up over the cross-braces in the bottom of the runway.)
- 9) Route left front cable #2 through the access hole and up out the left end of the front beam.
- 10) Reinstall the cross beam sheaves with one plastic bearing washer on each side of each sheave.
- 11) Reinstall the idler runway sheaves, with one plastic bearing above and below each sheave

per figures 5 & 6. **Note:** use one 2 1/8" long spacer at the idler rear sheave only.

- 12) Confirm that a 2 1/8" spacer is installed at the rear of the idler runway and none at the front of power or idler runways.

Fig 5 – Rear Single-Stack (idler runway)

Fig 6 – Front Single-Stack (typical for idler and power runways)

- 13) Attach both cross beams to the runways (**Fig. 4**) with M12 x 35mm lg. flange head bolts (two at each end of each runway) being careful not to pinch the air line. Leave the airlines hanging out the bottom of the crossbeam access holes at this time, they will be fed in through the runway after the lift is raised. **The outermost power runway slots should be in line with the outermost holes in the top of the cross beam, see Fig. 4.** The idler runway can be installed using the outer or inner sets of cross beam holes, see "Width Between Runways" dimension in **Fig. 1**. Do not torque bolts yet.
- 14) Check the layout of the lift in the bay. (**This is the last opportunity to reposition the lift.**) Adjust the position of the runways so the distance from power side jack rail to idler side jack rail is the same at the front and the rear and the diagonal measurements from the front tip of one rail to rear tip of the opposite rail are within 1/4", **Fig 7**.

Fig 7 – Final Runway Positioning

- 15) Center cross beam bolts with slots in runway and tighten. (Be careful not to move runways.)

COLUMNS

- 16) Stand up a column assembly near each corner of the lift (column with power unit bracket goes at the 4-sheave-stack corner, power rear) and check the locking ladder bar orientation per **Fig 8**. Note that the center of the threaded rod is offset (away from the back of the column) from the center of the ladder. Thread the locking ladder jam nut (located under the column top plate) down approximately 6" to allow the ladder to be lifted freely.

Fig 8 – Locking Ladder Orientation

- 17) Slide power side column onto cross beam until the M8 threaded holes in the side of the beam are just exposed. Position slide blocks as shown in **Fig 9** and attach with M8 x 16mm lg. bolts (**apply thread locking compound before installing**).

Fig 9 – Slide Block Installation

- 18) Raise the locking ladder, push the column against the slide blocks, and lower the ladder into the slide blocks, **Fig 10**.

Fig 10 – Locking Ladder Orientation

- 19) Repeat for remaining three columns.

ANCHORING

- 20) The anchor bolts must be installed at least 8" from any crack, edge, or expansion joint.
- 21) Use a concrete hammer drill with a 3/4 inch carbide bit. Tip diameter should conform to ANSI Standard B212.15 (.775 to .787). Do not use excessively worn bits or bits which have been incorrectly sharpened. A core bit may be necessary if an obstruction is encountered. **Never substitute with shorter anchor.**
- 22) Drill the anchor holes using the base plate as a template. Drill through the floor if possible or to a depth of 5 inches minimum.

- 23) Vacuum dust from the hole for proper holding power.
- 24) Shim columns to plumb using the shims provided or steel washers. DO NOT shim more than 1/2" at any given point. Use a level no less than 24" in length to plumb columns.
- 25) Assemble washer and nut to anchor with nut just below impact section of bolt. Drive anchor into hole until nut and washer contact base. Tighten anchor bolts and recheck column for plumb. Re-shim as required.
- 26) Torque to 150 foot-pounds to set anchors.

NOTE: Level bubble should not only be between the lines, the bubble should be centered between the lines. If the provided shims do not allow sufficient centering of the bubble, it is best to lean the rear columns in the direction toward each other and the front columns in the direction toward each other.

- 27) Install the four cable ends with one flat washer, one load nut, and one jam nut.
- 28) Install the power unit and the air button valve assembly on the power column, **Fig 11**.

Fig 11 – Air Button & Power Unit Mounting

- 29) Install O-Ring end of 90 degree hydraulic elbow (9/16-18 O-Ring x 37° Male JIC) to power unit output port. The hydraulic hose is pre-installed to the hydraulic cylinder and secured inside the runway. Pull loose end out through 1 1/2" x 4 1/2" slot in the side of the power runway near the power unit and attach to the elbow fitting.

Do Not Use Teflon Tape or Pipe Dope on fittings.

- 30) Have a certified electrician connect the power unit to a suitable electrical power source as shown in **Fig 16**.
- 31) **BE CERTAIN ALL FITTINGS AND CONNECTIONS ARE TIGHT. IT IS THE INSTALLERS RESPONSIBILITY TO ENSURE SYSTEM IS LEAK-FREE.** Fill the Power Unit with three gallons of clean 10wt anti-foam anti-rust hydraulic oil or Dexron III ATF. **DO NOT USE OILS WITH DETERGENTS.**

- 32) Energize the power unit and raise the lift approximately 1 ft off the ground and look underneath the power runway to verify that the cable lugs are resting firmly against the cylinder pull bar.
- 33) Level the runways and crossbeams using a 4 ft. level. With the lift resting in its locks, find the highest corner and adjust the other three column ladder bars until the runways are level front-to-rear and side-to-side. Tighten jam nut against bottom side of each column top plate.
- 34) Adjust cables until all four locks are synchronized when lift is raised. Tighten cable jam nuts against adjustment nuts.
- 35) Install 4mm air line from air valve assembly thru opening in runway to Tee fitting. **Fig 12**.

Fig 12 – Lock Release Air Line Routing

- 36) Route power side front and rear cross beam air lines through power runway to Tee fitting. Route idler side front and rear cross beam air lines through idler runway and connect together with 4mm air line splice provided. Route airline through welded rings on the outside internal edge of runways.
- 37) Use the provided wire ties and adhesive tabs to connect the 4mm air line inside the ends of the front and rear cross beam to the side plate welds as shown in **Fig 13**.

Fig 13 – 4mm Air Line Connection

- 38) Use the hose barb and clamp provided to connect the button valve to a suitable air source. **Air supply must be clean, dry, lubricated, and regulated to 90-120 psi.** The FRL, must be within 30 feet of valve. **Failure to provide clean, dry, lubricated, and pressure regulated air will void warranty on pneumatic components.**
- 39) Energize air valve assembly and ensure that all air cylinders are working properly.
- 40) Raise and lower lift several times to bleed hydraulic cylinder. Hydraulic cylinder is self-bleeding. Lower lift and check fluid level in reservoir. Add fluid as needed.
- 41) Run lift to full rise and continue running motor approximately 5 more seconds. Check hydraulic hose and connections for leaks. Retighten fitting if leaking.
- 42) Raise lift approximately half way. Slowly jog power unit until you hear one of the locks engage. Adjust locking ladder until it just barely raises the crossbeam end. Back off 1/2 turn. Repeat for each column.

DECAL PLACEMENT

- 43) Clean the column surface before placing any decals.
- 44) Install safety decals (NOTICE / CAUTION / WARNING) at the power unit as shown in **Fig 14** below. An illustration of these safety decals can be found on page 3.

Fig 14 – Safety Decal Placement

- 45) Place a logo decal on the rear surface of both the front driver side column and rear passenger side column. Center each decal left-to-right and position 4" from top of column, **Fig 15.**

Fig 15 – Logo Decal Placement

FINAL CHECKOUT PROCEDURE

- 46) Demonstrate the operation of the lift to the owner/operator/employer using a typical vehicle and review correct and safe lifting procedures using the **Lifting It Right** booklet as a guide.
- 47) Return all provided literature (including this manual) to the literature pack envelope and deliver the envelope to the owner/operator/employer.
- 48) Complete the online warranty registration (refer to the included warranty statement).

Wiring Diagram

* EACH LIFT SHOULD HAVE A DEDICATED CIRCUIT WITH A DOUBLE POLE (THREE POLE FOR 3 PHASE) BREAKER OR TIME DELAY FUSE SIZED ACCORDING TO THE FOLLOWING CHART.

	1 ϕ 208-240V	3 ϕ 208V	3 ϕ 220-240V	3 ϕ 440-480V
2Hp	30amp	15amp	15amp	5amp

* WIRING MUST COMPLY WITH ALL LOCAL ELECTRICAL CODES.

* ELECTRICAL CODE REQUIRES A SERVICE DISCONNECT FOR THIS DEVICE. WE SUGGEST THIS SERVICE DISCONNECT BE LOCATED NEAR THE POINT OF OPERATION.

FOR SINGLE PHASE

FOR THREE PHASE

NOTES:

- 1) MOTOR IS FACTORY WIRED FOR 208V OR 220-240V SUPPLY
- 2) MOTOR CONNECTIONS MUST BE RECONFIGURED PER THIS DIAGRAM FOR 440-480V SUPPLY
- 3) CONTACTOR COIL RATING MUST MATCH SUPPLY VOLTAGE (208V, 220-240V, OR 440-480V)
- 4) CONTACTOR MUST BE FIELD MOUNTED ON POWER COLUMN (CENTERED SIDE-TO-SIDE TO AVOID INTERFERENCE WITH SLIDE BLOCKS)
- 5) MOTOR ROTATION IS COUNTER CLOCKWISE FROM TOP OF MOTOR

Fig 16

OPERATION PROCEDURE

SAFETY NOTICES AND DECALS

This product is furnished with graphic safety warning labels, which are reproduced on page 3 of these instructions. Do not remove or deface these warning labels or allow them to be removed or defaced. For your safety, and the safety of others, read and understand all of the safety notices and decals included.

OWNER/EMPLOYER RESPONSIBILITIES

This lift has been designed and constructed according to ANSI/ALI ALCTV standard. The standard applies to lift manufacturers, as well as to owners and employers. The owner/employer's responsibilities as prescribed by ANSI/ALI ALOIM, are summarized below. For exact wording refer to the actual standard provided with this manual in the literature pack.

The Owner/Employer shall ensure that lift operators are qualified and that they are trained in the safe use and operation of the lift using the manufacturer's operating instructions; ALI/SM, *ALI Lifting it Right safety manual*; ALI/ST, *ALI Safety Tips card*; ANSI/ALI ALOIM, *American National Standard for Automotive Lifts-Safety Requirements for Operation, Inspection and Maintenance*; ALI/WL Series, *ALI Uniform Warning Label Decals/Placards*; and in case of frame engaging lifts, ALI/LP-GUIDE, *Vehicle Lifting Points/Quick Reference Guide for Frame Engaging Lifts*.

The Owner/Employer shall establish procedures to periodically inspect the lift in accordance with the lift manufacturer's instructions or ANSI/ALI ALOIM, *American National Standard for Automotive Lifts-Safety Requirements for Operation, Inspection and Maintenance*; and the employer shall ensure that the lift inspectors are qualified and that they are adequately trained in the inspection of the lift.

The Owner/Employer shall establish procedures to periodically maintain the lift in accordance with the lift manufacturer's instructions or ANSI/ALI ALOIM, *American National Standard for Automotive Lifts-Safety Requirements for Operation, Inspection and Maintenance*; and the employer shall ensure that the lift maintenance personnel are qualified and that they are adequately trained in the maintenance of the lift.

The Owner/Employer shall maintain the periodic inspection and maintenance records recommended by the manufacturer or ANSI/ALI ALOIM, *American National Standard for Automotive Lifts-Safety Requirements for Operation, Inspection and Maintenance*.

The Owner/Employer shall display the lift manufacturer's operating instructions; ALI/SM, *ALI Lifting it Right safety manual*; ALI/ST, *ALI*

Safety Tips card; ANSI/ALI ALOIM, *American National Standard for Automotive Lifts-Safety Requirements for Operation, Inspection and Maintenance*; and in the case of frame engaging lift, ALI/LP-GUIDE, *Vehicle Lifting Points/Quick Reference Guide for Frame Engaging Lifts*; in a conspicuous location in the lift area convenient to the operator.

IMPORTANT SAFETY INSTRUCTIONS

When using your garage equipment, basic safety precautions should always be followed, including the following:

1. Read all instructions.
2. Care must be taken as burns can occur from touching hot parts.
3. To reduce the risk of fire, do not operate equipment in the vicinity of open containers of flammable liquids (gasoline).
4. Keep hair, loose clothing, fingers, and all parts of body away from moving parts.
5. Use only as described in this manual. Use only manufacturer's recommended attachments.
6. ALWAYS WEAR SAFETY GLASSES. Everyday eyeglasses only have impact resistant lenses, they are not safety glasses.

SAVE THESE INSTRUCTION

LIFTING A VEHICLE

Drive vehicle onto lift. Set parking brake and/or use wheel chocks that are provided with lift.

When the vehicle has reached the desired working height, release the power pack button, and lower the vehicle until the locks are engaged. The vehicle should remain level when all locks are engaged. If one side engages and the other continues to descend, stop lowering the vehicle, raise it several inches, and try again to engage locks.

IMPORTANT, before walking under the lift ensure that all locks are properly engaged.

It is not safe to work under the vehicle unless all locks are engaged, and the vehicle is level.

LOWERING A VEHICLE

Ensure that the area under the vehicle is clear of personnel and tools.

Raise the vehicle until locks are free.

Disengage the locks by depressing the palm button and holding it.

Lower the vehicle by depressing the lowering valve handle. Watch lift to ensure that the lift is lowering evenly. If not, raise lift and check all locks to ensure they are disengaged before trying to lower lift again.

Continue to lower the vehicle until the crossbeams stop against the base plate. It is important to fully lower the lift to release hydraulic pressure on the system.

LOSS OF POWER

If for any reason, the lift will not raise off the locks or the locks will not retract, consult factory authorized personnel.

DO NOT OVERRIDE ANY SAFETY FEATURE IN AN ATTEMPT TO LOWER THE LIFT.

MAINTENANCE

To avoid personal injury, permit only qualified personnel to perform maintenance on this equipment. Maintenance personnel should follow lockout/tagout instructions per ANSI Z244.1.

The following maintenance points are suggested as the basis of a routine maintenance program. The actual maintenance program should be tailored to the installation and include a record of each planned maintenance activity and repair maintenance activity performed. Refer to the maintenance section of the ANSI/ALI ALOIM booklet (blue book) provided with the lift.

- If lift stops short of full rise or chatters, check fluid level and bleed both cylinders per Installation Instructions.
- Replace all Safety, Warning or Caution Labels if missing or damaged. (**See Installation instructions page 3.**)

Daily

- Keep lift components clean. **To keep alignment lifts with rear slip plates working properly use compressed air to blow out any debris from the bearing area.**
- Check for loose or broken parts.
- Check hydraulic system for fluid leaks.
- Check lock release activation.

Weekly

- Check cables and sheaves for wear or damage. Replace as required with genuine **Challenger Lifts Inc.** parts.
- Inspect lock mechanism for proper function.

Monthly

- Torque concrete anchor bolts to 80 ft-lbs.
- Clean and inspect cables and sheaves for wear or damage. Lubricate cables and sheaves with light oil.
- Visually inspect concrete floor for cracks and/or spalls within 12" of base plate.
- Adjust cables so locks engage simultaneously while raising, this will vary with load.

IMPORTANT! Failure to keep lift free of corrosive agents and solvents will lead to reduced service life, which could result in property damage and/or personal injury.

If any problems are encountered, contact your local service representative.
